

These commercial/retail grade headphones are a perfect solution for kiosks, music stores, libraries, museums or any other high traffic environment. They include durable ear cups and a heavy duty metal shielded cable. The phono plug is a standard 1/8" or 3.5mm connection that is used for most of today's audio devices. These headphones include a built-in volume control knob on one of the ear cups so that your customers can easily control the volume of the audio they are listening to.

We consider these our most comfortable commercial grade headphones because they include soft 1" thick padded ear cups and an adjustable padded headrest. Optional cable locks are available so that you can secure these headphones by the metal cable to prevent damage to the phono plug or internal parts of your audio device.
